FOREWORD

This compendium of Imported Raw Materials and Products provides information based on United Nations Commodity Description of the Harmonized Systems (HS) Code within the Standard International Trade Classifications (SITC). Adopting the HS code is to ensure international best practice of universal platform for comparability with other nations and standardization of systems and indicators used in further analysis, monitoring and informed evaluation. The items covered include Raw Materials and Products at primary, intermediate and secondary stages.

The items are presented with 10 digits code, the item groups are within the 4 digits code while the commodity groups are in the double (2) digit codes. A good example is to consider commodity group 04: Dairy Products with item group 0402: Milk & cream, concentrated or sweetened containing a specific item 0402211000; milk & cream in powder >1.5% Fat not containing sweet matter specially made. Each commodity/item identified under imports is to be tolerated for domestic capacity enhancement towards competitiveness in production. A time-series data set spanning 2010 to 2015 is compiled to provide numerical information about the quantity and value of each item. The value of every item in Naira is insurance based on Cost, Income and Freight (CIF) while quantities are measured as the net weight expressed in kilogrammes.

The six-year period under study provides empirical facts on the magnitude of imports and levels of over-dependence on imports to meet domestic requirements. This compendium has dealt with the commodity group sections (double digit) for Tables 1 and 3; and Tables 2 and 4 on item group (4 digits) and the combination of all commodity items on Table 5 (10 digits) on separate matrices. A chart on 15 major items of imports is also included.

This publication on imported Raw Materials and Products is a veritable Strategic Planning Infrastructure (SPI) that could meet the needs of Investors, Industrialists, Entrepreneurs, Researchers, Government, policy and decision makers for informed intervention. Efforts and resources could be properly channeled towards domestic production of the items listed by harnessing domestic potential for successful adoption of appropriate Standards, Conformity Assessment and Metrology parameters within the confines of Business and Societal concerns.

The compendium will also help Government to focus and target appropriate items that could be produced in Nigeria in the short, medium and long terms. Such domestic production and utilization will reflect in declining levels of imports over time.

We acknowledge with gratitude, the strong cooperation and collaboration framework between RMRDC and Nigeria Customs Service in making their data base accessible as well as cooperation with the National Bureau of Statistics, Central Bank of Nigeria, other relevant MDAs, as well as the Organized Private Sector (OPS).

This publication is recommended to all stakeholders involved in enhancing Nigeria's competitiveness in industrial production as a means of reducing our inherent high propensity for consumption of imported raw materials and products. Given dwindling oil revenue needed for national development, Nigeria's ambition is to look inwards and commence domestic production of essential Raw Materials and Products, especially in the areas where we have the potentials to source within the Country.
